

# Real-time Traffic Information Service(Freeway 1968)

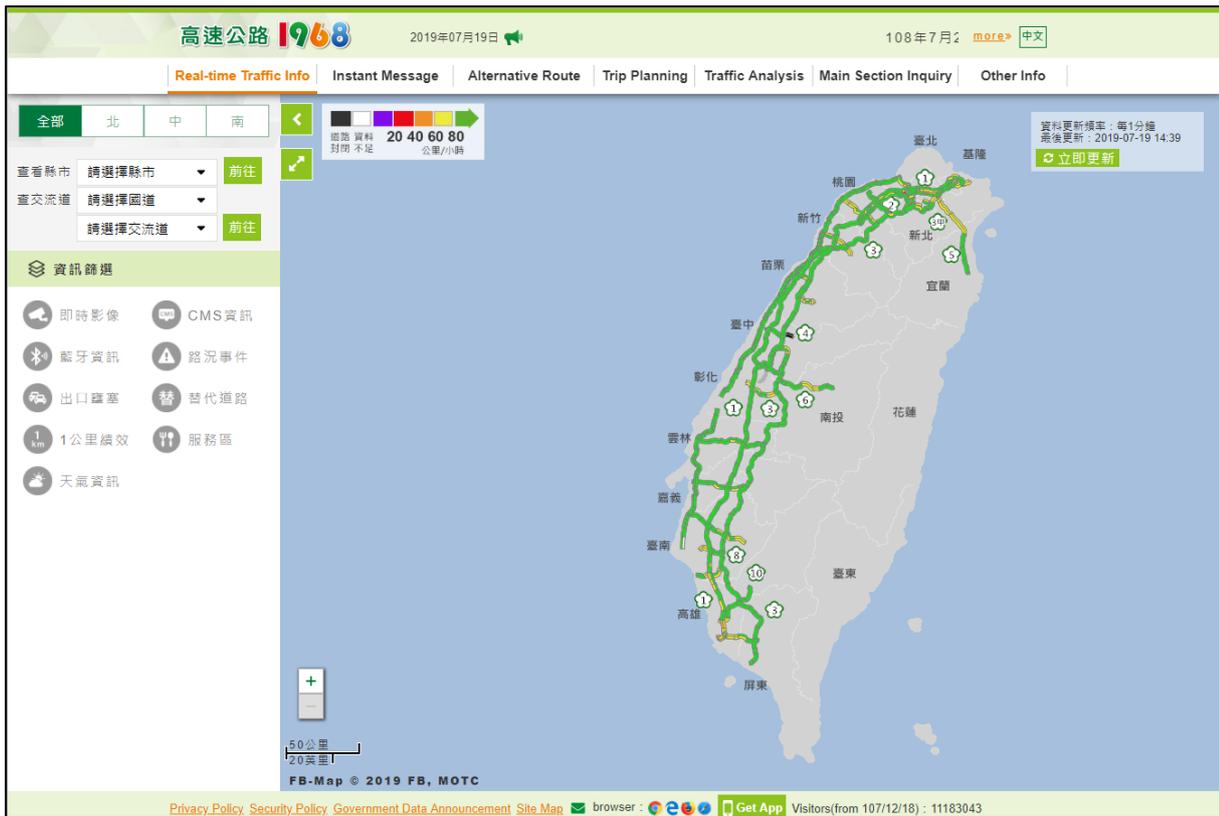

The traffic control system deals with automatically-collected and manually-input traffic information, which is transmitted not only to a display subsystem, but also broadcast via the internet to provide real-time traffic information to people. Through the “Freeway 1968” services, include website & mobile App, people can easily get real-time traffic information of national freeways and several expressways, such as CCTV images, average speed, incidents, displayed information on changeable message sign (CMS), congestion situation and so on.

## 1. Freeway 1968 Website Site Map

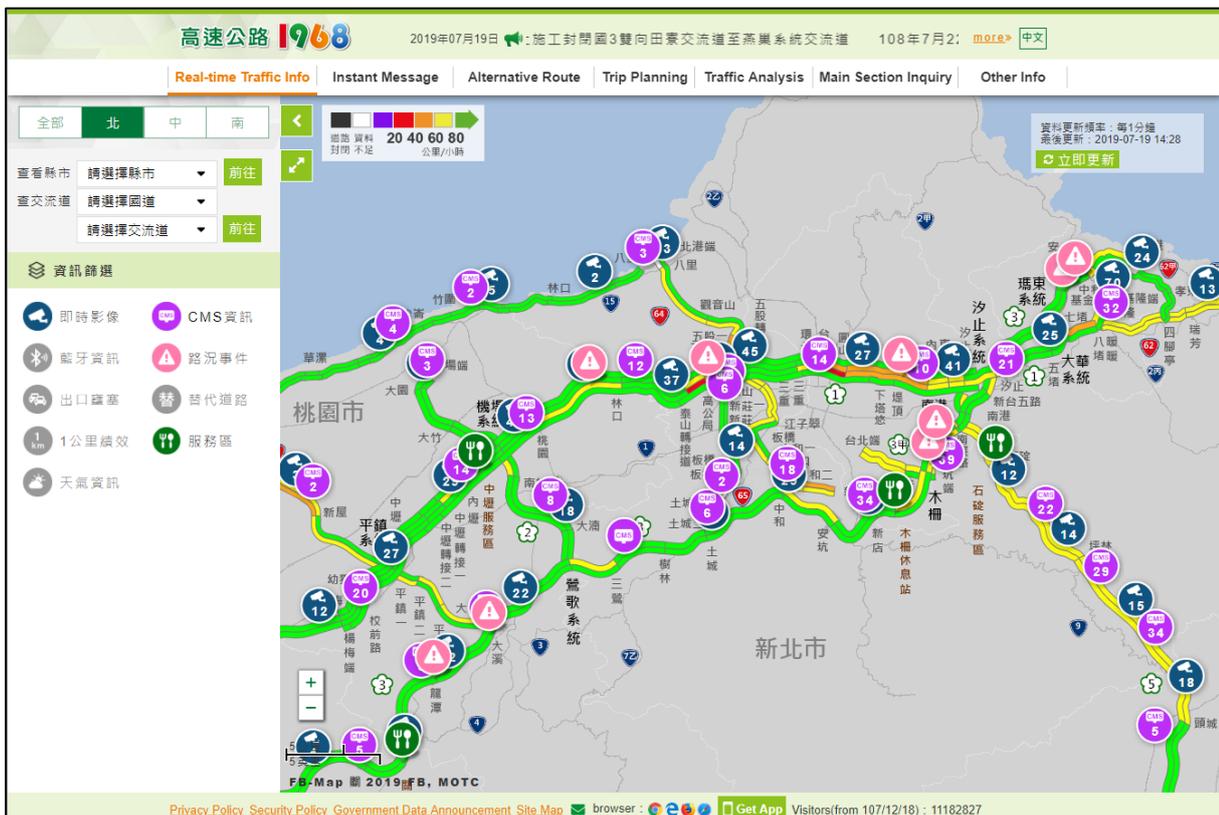

The screenshot shows the website interface for Freeway 1968. At the top, there is a header with the logo '高速公路 1968' and a date '2019年04月16日'. Below the header is a navigation bar with links: 'Real-time Traffic Info', 'Instant Message', 'Alternative Route', 'Trip Planning', 'Traffic Analysis', 'Main Section Inquiry', and 'Other Info'. The main content area is titled 'Site Map' and contains a grid of sub-pages organized into eight numbered categories:
